Requirements

MODULE	VERSION	WHY
Education	5.4.10	Calendar events, colors on the Class Calendar, Print Calendar
Shop	5.42.4, or 5.40.1.5 on the 5.40.1 line	Category Calendar Background Color, the Mass Duplicate End date fix
Shop (minimum for Education 5.4.10)	5.42.3 or 5.40.1.4	The repeat rule (<code>ClassRecurrence</code>) that Mass Duplicate uses

Deploy

1. Deploy the Education and Shop tags.
2. Apply the patches from Admin > Patches, or with `patch up` :

MODULE	PATCH	ORDER
Education	<code>Patch_ICV_1449_CreateCalendarEventTable</code>	first
Education	<code>Patch_ICV_1449_EventCalendarBackgroundColor</code>	after the table patch (it declares the dependency)
Education	<code>Patch_ICV_1449_CalendarEventRoutes</code>	any time
Shop	<code>Patch_ICV_1449_AddCategoryCalendarBackgroundColor</code>	any time

1. Clear the cache, so the admin sidebar shows Education > Calendar Events.

Until a color patch has run, the matching Calendar Background Color field is simply not shown, and events and categories save as before.

Who can use it

Staff who can open the Education module can use Calendar Events. The routes belong to the Education module, like Scheduled Classes and Messaging Settings.

Turn on printing

1. Open the page with the Class Calendar widget in the page editor and open the widget's settings.
2. Under **Show Calendar View**, set **Show Calendar Print** to **Yes**.

3. Save the page. The Print Calendar button appears at the right of the filter row.

Show Calendar Print is **No** by default, and Restore Defaults sets it back to No.

Set category colors

1. Go to **Education Settings > Categories** and open a category.
2. Pick a **Calendar Background Color**, or type a value such as `#4a90d9`, and save.
3. Leave it empty for the category's classes to use the widget's Event Background Color.

Storefront calendar

Events show within the months the Class Calendar widget allows (its # of Previous Months to Allow and # of Future Months to Allow settings). An event outside that range is kept but not shown.

Smoke test after deploy

1. Education > Calendar Events shows the empty state with + Add a Calendar Event.
2. Create an all-day event for next week. The grid shows it with All Day.
3. Open it, choose Actions > Mass Duplicate, repeat weekly on its weekday after 2 events. Two new events are listed.
4. On the Class Calendar the three events show; pointing at one shows its content.
5. Choose a Category filter: the events disappear; choose All: they return.
6. Give the event a color and a category a color; both show on the calendar.
7. With Show Calendar Print on, Print Calendar opens the print dialog with the calendar alone.

Troubleshooting

SYMPTOM	CAUSE AND FIX
No Calendar Events in the menu	Clear the cache. Check the Education patches ran.
Calendar Events gives a 404 or "not allowed"	Run <code>Patch_ICV_1449_CalendarEventRoutes</code> .
No Calendar Background Color field	Run the matching color patch (Education for events, Shop for categories).
An event is not on the calendar	It is outside the widget's month range, or a class filter is set.
A class is not in its category's color	The class is full (it shows the Full Class color), or a more specific category of the class has another color.
No Print Calendar button	Show Calendar Print is off in the widget settings.
