

INDITION COMMERCE

Class Mass Duplicate — Setup Guide

What a site needs before administrators can repeat classes, and how to check that it works. There is nothing to switch on: the feature ships with the Shop module.

Class Mass Duplicate Documentation · October 22, 2026

Requirements

REQUIREMENT	DETAIL
Shop module	Tag 5.42.3 or later (ICV-1448)
Database	No migrations or patches
Product type	Classes are products of the <code>education</code> product type
Class schedule	The class's sub-product attribute groups include Date (format m/d/Y) and Time; Location is used when present
Browser	Any current Chrome, Safari, Edge or Firefox for the admin

Deploy

1. Deploy the Shop tag 5.42.3 to the site, as for any Shop release.
2. Clear the site's caches the usual way after a deploy.
3. No configuration, settings or menu changes are needed.

Where the actions appear

PAGE	MENU ITEM	SHOWN WHEN
Class edit page	Actions › Mass Duplicate Class	The class is saved and at least one of its sub-products has a date
Class sub-product edit page	Actions › Mass Duplicate	The sub-product is saved and has a date
Class sub-product edit page	Actions › Duplicate Class	The sub-product is saved
Sub-product edit page, other product types	Actions › Duplicate Sub-product	The sub-product is saved

None of them appear in Schedule Product Changes mode.

Check the class data first

Mass Duplicate reads each sub-product's Date and Time attributes. Before using it on a live class:

- Open the class's Sub products tab and confirm every sub-product shows a date.
- Open one sub-product and confirm its date, start time, end time and time zones are filled in.

- For a multi-session class, confirm the Sessions section lists every session with its date and times.

Mass Duplicate Class copies every sub-product of the class onto each new date, so tidy up any sub-product you do not want repeated first. Only a sub-product with a date can be the source of a sub-product Mass Duplicate.

Storefront calendar

New classes appear in the class calendar widget like any other class. How far ahead the calendar shows classes is set on the calendar widget itself, not by Mass Duplicate. If you schedule a year ahead but the widget shows three months, customers see three months.

Smoke test after deploy

1. Pick a test class with a future date. Choose Actions > Mass Duplicate Class.
2. Set Repeat every 1 week(s), tick one weekday, Ends After 2 classes.
3. Hover the "?" and read the description. Click Create Classes.
4. Confirm two new classes are listed, open one, and check its sub-products' dates, times, SKUs and reserved seats (0).
5. Delete the two test classes from the Classes grid when done.

Troubleshooting

SYMPTOM	CAUSE	WHAT TO DO
Mass Duplicate Class is not in the Actions menu	No sub-product of the class has a date, or the page is in Schedule Product Changes mode	Give a sub-product a date, or leave schedule mode
"No class date falls ... on or before the end date."	The end date is before the first date the rule produces	Choose a later end date, or end after a number of classes
A list of clashes appears	Two sub-products would start at the same date and time	Go Back and change the times or the rule, or Create Anyway
SKUs end in -2	The plain dated SKU was already taken	Nothing; SKUs must be unique, so the next free one is used
Calendar does not show the later classes	The calendar widget's range ends sooner	Extend the widget's range
