Bulk Inventory Settings

Marketing Blog — reorder points for a whole product line, set in the time it takes to pick the products.

The season starts. Your reorder points did not get the memo.

Every store knows the moment. A new season is coming, the best sellers are about to move twice as fast, and every reorder point in the system was set for the quiet months. Changing them means opening each SKU, scrolling to its planning, typing a number for each location, saving, and doing it again. Two hundred SKUs, three locations each.

Most stores give up and reorder by feel. The numbers in the system drift further from how the business actually runs, and the purchase order suggestions built on them stop being worth reading.

Set it once, for everything that should share it

Bulk Inventory Settings puts the inventory settings that shape how you count and reorder stock on the Bulk Products Update page, next to everything else you already change in bulk. Choose the setting, choose the value, choose the products. Done.

Reorder Point, Min Qty, Max Qty, Lead Time Days and Safety Stock can be set for any number of SKUs at the locations you pick, store by store. A SKU that has never had planning at a location simply gets it. The purchase order recommendations your buyers rely on start from numbers that match the season you are in.

Serial numbers when you need them, not when you remember

Moving a product line to serial number tracking used to be a SKU-by-SKU job, and an easy one to get wrong: switch on a SKU that still holds stock without serial numbers and the count stops adding up. Bulk Inventory Settings checks every SKU against your store's own rule before it switches anything on, and lists the ones that need their stock dealt with first. The rest are done.

Sell by the yard, cut to size

Fabric, ribbon, rope, bulk goods: products that sell in parts of a unit. Turn on fractional quantities for a whole line in one step. Running Pre-Cuts? Set up the source rolls and every finished cut size, with their unit of measure, just as quickly.

Nothing changes that you did not ask for

Every setting has its own switch, and only the settings you switch on are touched. Products a change cannot apply to are never changed: they are listed, with the reason, so you know exactly what to fix. One awkward product never holds up the rest.

Plan it, then forget it

Schedule a change for the morning the season starts, and it happens then. Every change, scheduled or immediate, lands in your bulk update history with each product's settings before and after, and can be put back with one click: a single product, or the whole batch.

Available now

Bulk Inventory Settings is part of Indition Commerce with Inventory. Open **Shop → Bulk Products Update** and choose the **Sub-Product Inventory** tab.
