Create Kit

- Create Kit on Inventory > Kit Builds, the page's one button
- Two steps in one dialog: the kit's product, then its SKU
- Product type first, the default type picked; categories and pages follow the type
- Categories and Stores in the product screen's checkbox picker: filter, Select All, Clear, count
- Every store ticked to start with; the page most of the type's products use picked
- Vendor and SKU; a SKU the vendor already uses is refused on its field
- Assembled kit or Bundle, each explained on its card
- Back keeps what was entered; Cancel, Escape or close leaves without saving
- One request makes the product, its SKU, its stores and categories and its web address, or nothing at all
- Web address from the name, made unique with -2, -3
- Saved inactive; opens on the new SKU's Kit SKUs tab with *Kit created*

Kits

- Make this a Kit on any product SKU, kept even before parts are added
- Parts and quantities on the SKU's Kit SKUs tab or in Products > SKU Breakdown
- Fractional part quantities where fractional quantities are on for the part
- Kit type per kit: Assembled kit or Bundle
- Parts on receipt per kit: follow the receipt, always, never
- A bundle sells as many as its scarcest part allows
- Rules kept: no bundle in a bundle, no bundle as a part, no change to Bundle while the kit holds stock

Build Kits

- Kit picker of assembled kits by SKU or name
- Parts planned from the locations with the most stock, editable, several locations per part
- Serial numbers chosen for serial-numbered parts
- Kits placed in one or more locations; starts where the kit already is
- Packaging, labor and other cost lines, per kit or once per build
- Cost lines saved on the kit fill in its next build
- Live estimate: parts at FIFO cost, packaging and labor, total, cost per kit
- Covered, more needed, too many, per part and for the kits
- All or nothing: a refused build changes nothing
- The kit's purchase cost set to the cost per kit

Take Kits Apart

- Kits out of one or more locations
- Parts back into one or more locations, serial numbers included
- Value back to the parts by their share of the latest build; packaging and labor written off
- Estimate before you confirm

Kit Builds history

- Every build and take-apart, newest first, server-paged
- Filters for build, type, kit SKU, name, quantities, costs, who and when
- Export of selected, filtered or all rows to Excel
- A page per build: costs, parts and locations, kits placed, cost lines, serial numbers
- One kit's history from its SKU Breakdown window
- An empty state with Create Kit when nothing has been built

Selling

- Assembled kits sell from their own stock
- Bundles take each part out of stock at the sale, online and at the register
- Holds, refunds and special orders of a bundle move each part
- Kit contents on POS receipts: one line, each part on its own line, or off
- Kits counted on cycle counts like any product
